TITLE 12. NATURAL RESOURCES

CHAPTER 1. RADIATION REGULATORY AGENCY

ARTICLE 14. REGISTRATION OF NONIONIZING RADIATION SOURCES AND STANDARDS FOR PROTECTION AGAINST NONIONIZING RADIATION

R12-1-1438. Hair Removal and Cosmetic Procedures Using Laser and Intense Pulsed Light

There have been many questions relative to timing of this rule's implementation. Operators using or wishing to use a medical laser or IPL system for hair removal or cosmetic procedures will be affected as follows: All operators must have participated in an approved didactic training course and actual hands experience under direct supervision by a licensed practitioner who is qualified by their training and experience and is authorized to do so in accordance with their licensing board.

Operators will be required to meet the didactic training requirements by attending an approved course. Operators active before April 1, 2005 must demonstrate through documentation that they meet the rule's didactic training including time and subject requirements. In both cases supervision must be provided by a licensed practitioner. If the operator is unable to provide documentation to demonstrate the required didactic training they shall attend an approved course meeting the rule standards.

Additionally, all operators must be able to provide documentation, by the licensed practitioner, that the operator has met the direct supervision and observation requirements, is competent and adequately trained to safely perform treatments as ordered by the licensed practitioner.

The currently approved training resources for required didactic training.
